Agreed on the profile, with the caveat that they will not be deleted. In the event the matching tech catches up where tilt and yaw threshold increases they still are available to be enrolled. Which it sounds like it will remain in the images DB however not enrolled as all sides that are sent to the system from the various jails that could be used when the tech can handle. Good stuff.

These images I don't mind so much, they are forward facing and they do seem to work.

I guess the white card is far enough away from the face it can clearly ID the face.

I was surprised as hell when this image hit, but I have actually hit on a couple of these.

So while they are ugly they do work. Full profiles, not so much.

Example of a candidate image that wouldn't have been enrolled if threshold was increased however provided a solid lead.
